Efficacy and safety of Atorvastatin in major cardiovascular events: Meta-analysis

Villegas-Quintero V E. et.al; Rev Med Inst Mex Seguro Soc; 2023; 61(3): S407-S415.

- Atorvastatin is used in the management of dyslipidemia and little is known about the efficacy and safety of high-dose atorvastatin administration for secondary prevention of Major Cardiovascular Events (MACE).
- The present study is a meta-analysis (6 randomized clinical trials; n=29,333 patients) that evaluated the impact of high-dose Atorvastatin on secondary prevention of MACE.
- A 20% risk reduction with Atorvastatin 80 mg compared to other therapies was found.
- The use of 80 mg Atorvastatin is associated with similar adverse events at lower doses.

Atorvastatin is effective in the secondary prevention of Major Cardiovascular Event.
